

1. Source identity

published matrix, basis order,
coproduct, parities

e.g. Çelik–Çelik 2021, p. 261

2. Exact construction

`sympy.Matrix`, symbol q

`build_representation`

`R_matrix_V1_coproduct`

`R_matrix_GLq21`

3. Tensor placement

$\Delta(X)$ on $V \otimes W$; R_{ij} on $V^{\otimes n}$

`kron`, `coproduct`

`embed_R_in_tensor_power`

(graded adjacent swaps)

nonzero: inspect entries, check convention

6. Regression test

`python -m pytest` in CI;
wrong conventions must
give nonzero residuals

`tests/test_audit_regressions.py`

5. Exact zero test

every entry simplified;
nonzero entries located

`is_zero_matrix`

`*_holds`, `RelationCheck`

4. Residual

LHS – RHS returned
as an exact matrix

`qybe_residual`

`intertwining_residual_V1`

`graded_yang_baxter_residual_GLq21`
